

Can Nguyen

+1 (626) 627-4634 | cannguyen312@gmail.com | Irvine, California, USA | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience in backend and full-stack development. Skilled in Java, Spring Boot, React, AWS, and SQL/NoSQL, with success delivering cloud-native microservices and APIs for 20+ teams. Known for improving reliability, reducing latency, and boosting productivity through CI/CD automation and infrastructure-as-code.

SKILLS

Languages: Java, Python, C++, SQL (Oracle/MySQL/PostgreSQL), NoSQL (MongoDB, DynamoDB), JavaScript/TypeScript

Frameworks: Spring Boot, Spring, Hibernate, Javalin, React, Angular, Node.js, Flask, Django.

Cloud/DevOps: AWS (EC2, RDS, ECS, Terraform, Lambda, CloudFront, CloudWatch), Docker, Kubernetes, Jenkins, Maven.

Testing: JUnit, Mockito, Jasmine, Selenium, Karate, Cucumber, Cypress, Pytest, Playwright.

Other: Git, REST APIs, GraphQL, Kafka, Redis, Microservices , GCP, Azure, AWS Certified Cloud Practitioner.

PROFESSIONAL EXPERIENCE

Mercor / HandshakeAI

February 2026 - Present

Technical Reviewer, SWE-Agentic Benchmark - Contractor

Remote

- Reviewed coding benchmark tasks for AI agent evaluation, auditing specs, tests, and rubrics across files for consistency, solvability, and fairness.
- Assessed rubric quality across the functional, robustness, and trajectory dimensions; reviewed reasoning trajectories to improve evaluation of model decision-making while preventing test leakage.
- Authored Docker-containerized coding benchmark tasks for Terminal-Bench 2, writing instruction specs, reference solutions, and pytest verifications to deterministically score AI coding agents' performance through a multi-stage review pipeline.
- Crafted adversarial multi-source research prompts to stress-test frontier LLM web search (ChatGPT); evaluated AI completions against communication-quality rubrics using Likert scoring to surface model-improvement signals.

JP Morgan Chase

November 2022 - February 2026

Product Agility Tools (PAT) Platform - Software Engineer II

Wilmington, DE, USA

- Designed and built the PAT Financial Operations Service (PAT-FOS), which tracked team budget allocations, processed inter-team budget transfers, and ran an event-driven detection engine to flag unauthorized or unusual spending across teams at JPMorgan Chase.
- Architected the backend using Java, Spring Boot, and Kafka for asynchronous transfer processing; used Redis for caching, PostgreSQL for transactional data, and MongoDB for fraud assessments and audit trails.
- Enhanced system scalability and reduced deployment errors by 30% by applying Kubernetes, Docker, and Terraform to automate CI/CD pipelines with Jenkins and Spinnaker.
- Deployed and scaled services on AWS (EC2, ECS, RDS, Lambda) using infrastructure-as-code; applied Oracle Database query optimization and indexing to maintain performance under high team-metadata load.

Infosys

January 2022 - November 2022

Setup Wizard Project (Smart Setup for Pixel 6 Devices) - Software Engineer

San Jose, CA, USA

- Worked with Google client on the Setup Wizard (Smart Setup) project, building end-to-end automation testing for the device onboarding process on Pixel 6 devices running Android OS.
- Built a responsive Single Page Application (SPA) using React/JavaScript with a real-time Node.js backend, providing real-time insights into test results, improving speed by 25%.
- Developed the testing framework using Python, Mobile Harness (internal framework), and integrated it with the Google Testing Environment to ensure the accuracy of device setup workflows across various environments.
- Improved SQL query performance and database indexing on RDS, and leveraged DynamoDB for caching, resulting in faster data retrieval across key endpoints.

REVATURE

September 2021 - January 2022

WellNet Platform - Software Developer

Remote

- Contributed to WellNet, a hospital management platform for doctors and nurses to track patient symptoms, confirm diagnoses, assign rooms, and handle COVID-19 work clearance.
- Built core application features for COVID-19 screening and symptom reporting using Java, Spring Boot, and Angular/TypeScript, enabling nurses and doctors to make decisions faster.
- Developed and optimized RESTful APIs and data access layers using Spring MVC, Hibernate, and JDBC Template, improving query performance by ~25%.

EDUCATION

University of California - Irvine

August 2017 - June 2020

Bachelor's, Computer Science
